

Changes to default TTO and TTO wording

TTO wording:

Sip feeds on TTOs – guidance for GPs

This patient has been receiving sip feeds as an inpatient and has been given a 7-day supply on discharge.

- If the patient has been under dietetic review during their admission, separate guidance on prescription of sip feeds for this patient will be provided by letter from the dietetic service
- If the patient is under ongoing dietetic review, guidance will have been provided previously and a further letter will only be sent if there are any changes to the treatment plan

For patients who are not under dietetic review, (ie if no dietetic guidance is received) please re-assess the need for sip feeds using the community nutritional screening tool (MUST) before prescribing. Also refer to local nutritional support guidance (e.g. for Solihull: 'Guidelines for oral nutrition support in adults 2011'- available on the Solinet policy and procedures section of the intranet).
